PROFESSIONAL SUMMARY

Product builder with experience creating real-time systems and data-driven products. Founded FantasyIntel.io, integrating 15+ data sources into fast, reliable user features, and built a multimodal search engine for 20,000+ trading cards using three-tower retrieval, learned ranking, and human-graded relevance data. Previously helped scale Courial from launch to more than $4M in revenue while leading operational workflows, automation, and incident response.

SKILLS

- **Product:** Prioritization, stakeholder communication, cross-functional collaboration, technical scoping
- **Technical:** Python, SQL, REST APIs, Git/GitHub
- **Search & ML:** XGBoost, embedding search, BM25, CLIP/SigLIP, multimodal retrieval, search ranking
- **Data & Evaluation:** Data pipelines, API reliability, multithreaded fetching, NDCG evaluation, root cause analysis
- **Operations:** Incident response, escalation triage, process scaling, risk mitigation

WORK EXPERIENCE

Founder – Staiz.io Nov 2025 – Present

- Built and launched Staiz, a visual search engine for 20,000+ Pokémon TCG cards searchable by mood, scene, and style
- Designed a three-tower retrieval pipeline using CLIP embeddings, OpenAI text embeddings, and BM25 search across query types
- Built an XGBoost reranker with 55 features for similarity, semantic matching, and feedback, raising NDCG@10 from 0.52 to 0.890
- Used GPT-4o Vision to generate visual descriptions at scale, improving searchability by scene, mood, and detail
- Created the search evaluation workflow with test queries, 3,665 graded judgments, and diagnostics to improve search quality

Founder – FantasyIntel.io Aug 2024 – Present

- Built a live sports analytics platform that streamlined manual workflows and reduced analysis time from hours to seconds
- Defined and prioritized the product roadmap across the Stream Command console, AI analysis features, and ESPN integrations
- Turned user needs into technical requirements and performance targets, including sub-second response times and 15+ sources
- Architected a resilient pipeline across 47 API endpoints with validation and failover for real-time workflows and expansion
- Implemented an AI layer with Claude and LangChain for personalized recommendations and matchup analysis

Head of Dispatch Operations – Courial | San Francisco, CA Feb 2021 – Jul 2024

- Scaled operations from launch to $4M+ in revenue, helping secure investment from Elemental Excelerator and Techstars
- Partnered with engineering to automate dispatch workflows and improve on time-fulfillment
- Led incident response during DDoS attacks and infrastructure failures, directing routing strategy to maintain service continuity
- Coordinated live communication across partners, drivers, and internal teams during critical disruptions
- Analyzed patterns across 100K+ deliveries to detect anomalies, identify bottlenecks, and drive operational improvements

NOTABLE PROJECTS

AI Assistant Red Team Security Assessment – Neurun (Google-funded startup) Jan 2025 – Mar 2025

- Simulated adversarial prompt injection and logic mapping attacks on a production AI assistant deployed by a high-growth startup
- Identified 12 critical and 6 high-risk vulnerabilities, all of which were vendor patched

Cybersecurity Training & Homelab Projects – Self-Directed Aug 2024 – Present

- Built an enterprise homelab with Active Directory, Windows and Linux VMs, Wazuh SIEM, Security Onion, and Postfix
- Deployed honeypots; tuned detections and incident response; mapped to MITRE ATT&CK
- Centralized log forwarding and alerting with correlation; hardened Postfix against spoofing and relay abuse

EDUCATION

Penn State University, University Park, PA – B.S. Finance (GPA 3.65/4.00) Dec 2019

ADDITIONAL DETAILS

- **Certifications:** CompTIA Security+ (SY0-701), CompTIA Network+ (N10-008)
- **Business Fraternity (Phi Chi Theta) & THON:** Helped raise $85,000+ for pediatric cancer research in a single year
